

MedPATH Networks Is New Feature Member for Broadband for America

Monday, May 17, 2010 – San Antonio, TX.

Broadband for American and MedPATH Networks continue their collaborative partnership in providing broadband services across America closing the gap between the digitally deprived and digitally abundant regions of America. Broadband for America has asked MedPATH to feature as their “Featured Member” on the organizations webpage, broadbandforamerica.com.

Throughout recent months Broadband for America and MedPATH Networks have been collaborating together using MedPATH’s expertise in healthcare IT networking to further advancing the healthcare IT technology industry. MedPATH’s network provides the means for healthcare providers and device manufacturers to offer more efficient technology that leads to cost effective patient care. Broadband for America has provided MedPATH with a platform to promote their ConvergedCare™ family of healthcare services that has recently been referred to as, “the new face of healthcare IT.”

Healthcare data is only as meaningful and useful as one’s ability to access it. In a world of proprietary data languages and software applications, important data is fragmented and sequestered to immobilizing degrees. The management of patient information, facility interconnectivity and regulatory compliance, consequently, requires countless hours of provisioning, computing and attempted converging. Ultimately, healthcare providers are forced to set aside patient care and, instead, function as data managers.

MedPATH’s ConvergedCare™ platform enables interconnectivity between multiple medical software sources and provides secure connections to any local or global healthcare IT system. This Global Health Data Exchange (GHDX) platform means the turn key integration of all facets of healthcare information exchange, seamlessly interfacing Point-of-Care (POC), Electronic Medical Records (EMR), Telehealth, Telemedicine, medical device applications, and healthcare software packages.

MedPATH Networks transforms healthcare information access while delivering new broadband options underserved markets and allows Practitioners to focus on what they do best – providing quality patient care.

MedPATH and Broadband for America will continue to foster new partnerships within the healthcare delivery and information industry to help ease the pain of healthcare providers and device manufacturers across the country providing cost effective and viable solutions for any organization while increasing the reach of affordable and reliable healthcare solutions in the digitally deprived areas of America.
